Languages and Technologies I Speak

- JavaScript/TypeScript
- Ruby
- PHP
- Python
- Java
- C#
- HTML/CSS

- NodeJS
- React
- Vue
- Angular 2+
- Laravel
- Ruby on Rails
- MySQL and Postgres

Experience

Intern @ Applied Invention

2019-2020

Worked with a team using a Scrum process on a realtime Angular/Python app which was used to replicate spreadsheet-like functionality for a large group of people.

Intern @ Stenhouse Consulting

2018

Worked with consultants for any tasks they wanted my help with, worked on client FileMaker projects, and worked with the help desk to audit the in-house inventory. I also created a system to track and display recurring client maintenance tasks.

Intern and Team Leader @ Student Technology Assistance Team

2016-2020

Oversaw a 20+ student team that worked with the IT department to manage approximately 2000 Chromebooks issued to every student and teacher in the school district. Diagnosed and fixed hardware and software issues, as well as contacted third party repair services. As leader, I managed the operations of the team, and built a system used by members to track device issues ("tickets") with PHP and MySQL.
